

Assignment 2 Design Document

mathlib.c:

#Includes various mathematical functions. Each function does the math function in its name.

EPSILON = 10^{-10}

my_sin(x):

```
total = x
term = x
For (n=1; term>EPSILON; n += 1):
    term = x/(2n)*x/(2n+1)*term
    If n is even:
        total = total + term
    else
        total = total - term
return total
```

my_cos(x):

```
total = 1.0
term = 1.0
For (n=1; term>EPSILON; n += 1):
    term = x/(2n)*x/(2n-1)*term
    If n is even:
        total = total + term
    else
        total = total - term
return total
```

my_arcsin(x):

```
curr = 0
prev = 1.5
While (curr-prev >= EPSILON or curr-prev <= -EPSILON):
    prev = curr
    curr = curr - (my_sin(curr)-x)/my_cos(curr)
return curr
```

my_arccos(x):

```
    return pi/2-my_arcsin(x)
```

square_root(x):

Take provided code.

my_arctan(x):

```
    return my_arcsin(x/square_root(x^2+1))
```

Exp(x):

Take provided code.

my_log(x):

```
    curr = 1.0
    prev = 0.0
    While (curr-prev>=EPSILON):
        prev = curr
        expon = Exp(curr)
        curr = curr + (x-expon)/expon
    return curr
```

mathlib-test.c:

#Runs tests comparing mathlib.c to the standard math library.

Take arguments are run associated code:

-a:

Run all other code

-S:

print header

for (i=0; i<2pi; i += 0.05pi):

```
    print i, my_sin(i), math.sin(i), difference
```

break unless a

-C:

```
print header
for (i=0; i<2pi; i += 0.05pi):
    print i, my_cos(i), math.cos(i), difference
break unless a
```

-S:

```
print header
for (i=-1; i<1; i += 0.05):
